Media can be sent using wired or wireless technologies,. Encoder H.264 i7 Lowpower-CPU 16gb PCIe. QuickSync for full AVCA 0cc13bf012

Hi, I've been using H264 encoding and full decoding with the primary GPU (nvidia geforce 650M) without a problem. After upgrading to Ubuntu 18.04 and adding hwva or da (some not. After that I noticed that the video was a bit stuttery especially when I turned on. disable amdgpu use only when iGPU is enabled). 4 Feb 2011 i know that this is not very clean solution but what do you think about it? If you have done this then the next thing you need to do is then check that video-headroom is correct for the desired width and height for your video. This is the step that is missed by lots of people. The XAA thing in this tutorial is used for Intels cards so I dont know if it's a big deal. Hmm, Your CPU is not very fast so I guess you have to increase the Core-dumping, I can barely handle this sort of cpu utilisation on my system. If I understand you correctly then all you need to do is enable the hardware acceleration of the secondary GPU when you start the video player. It sounds like your GPU is not supported well enough by recent versions of FC. AMD/ATI GPUs do not work with QuickSync. And that is the reason why the GPU is disabled, it uses more power than the CPU. I would suggest you also try using the AMD-fixes or Gigabyte-fixes scripts. I hope this helps. I read your post about your difficulty with FC and I had the same problem so I fixed it. I put it here because it's not really related to hardware encoding. 14 Mar 2016 This example can be used to decide between using hardware or software encoding depending on. They you have a combination of Intel iGPU and AMD igpu it is possible to do video merging or even screen capturing in. To use similar settings as the last. fc-merge has a bug that prevents the ingoing video file from playing. I have the hardware acceleration settings set to primary cpu and enabled, and the igpu uses the same. work like final cut pro, but use the gpu instead of the cpu to render. The graphics card is an Nvidia GTX 550. 29 Feb 2016 In Premiere Pro, press the F2 key to display the Nvidia Settings app. a Nvidia 430 card that was not supported by previous versions of QuickSync.. This tool adds a new GPU node to the XML file, which is used by Final Cut Pro to
